MAGNETOSTRICTIVE LEVEL TRANSMITTER - ADVANTAGES & APPLICATIONS

This 3-in-1 tool allows you to measure product level, interface level and temperature with one measurement instrument.

The Magnetostriuctive Level Transmitter provides analog communication for Magnetic Level Gauge applications. You can externally mount it without interrupting the monitoring process that is already being conducted by your Magnetic Level Gauge, and the sensing elements and electronics can be removed without disturbing the operation process either.

We want you to make it easy for you to use the BAMR transmitter, so we provide a variety of mounting options and pipe styles. If required, your transmitter can also come equipped with an on-board display and keypad for local indication and programming.

With FM and CSA approvals for US and Canadian requirements, our Magnetostriuctive Level Transmitters can be used on your projects for a secondary method of liquid level monitoring.

Industries Served

- Oil & Gas
- Chemical
- Marine
- Mining
- Water/Wastewater
- Pharmaceutical
- Power

Applications:

- Hydrocarbons
- Solvents
- Water
- Acids
- Caustics
- Condensate
- Clean Liquids

Highlights

3-in-1 instrument for measuring product level, interface level and temperature

Can be mounted without interrupting monitoring process
